ABSTRACT

List of published work using this procedure:

- Kustrimovic, N., Comi, C., Magistrelli, L., Rasini, E., Legnaro, M., Bombelli, R., Aleksic, I., Blandini, F., Minafra, B., Riboldazzi, G., Sturchio, A., Mauri, M., Bono, G., Marino, F., & Cosentino, M. (2018). Parkinson's disease patients have a complex phenotypic and functional Th1 bias: cross-sectional studies of CD4+ Th1/Th2/T17 and Treg in drug-naïve and drug-treated patients. Journal of neuroinflammation, 15(1), 205. https://doi.org/10.1186/s12974-018-1248-8

BEFORE STARTING

Make sure that the buffer is **cold (+4°C)** by putting it on **ice** for all the time needed to perform this protocol!

You need to obtaine **TEFF and TREG cells uncontaminated for the subsequent cell culture**, hence make sure you are using **sterile buffers** and **sterile plastic disposables** as well.

Moreover, work under laminar flow hood when you are processing samples (from the beginning to the end of the following procedure).

1 Isolate PBMCs according either to the standard protocol from fresh blood or from buffy coat (PBMC- 01a - Isolation of Human PBMC from Buffy Coat, PBMC- 01b - Isolation of Human PBMC from Whole Blood).

2 Determine the cell number and viability with the microscope by staining with either Türk or Trypan blue. You can use also Cellometer machine. **(PBMC purity should be ≥95% with few contaminant PMNs to prevent clogging of the column).**

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 03 - TEFF+TREG Isolation from PBMC with Ã¢ÂÂMiltenyi CD4+CD25+ Regulatory T cell Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxumpnw

For manual cell count use Türk solution for checking purity.
Follow protocol CELL COUNT- 02.

For automatic cell count with Cellometer machine use Trypan Blue for checking viability.
Follow protocol CELL COUNT- 03

3

OPTIONAL STEP

Sorting of TREG is quite long procedure. Especially in clinical studies with whole blood of enrolled subject, it is possible to stop it after PBMC isolation and counting.

In this case, put cells in a flask with **SOLUTION- 13** at a concentration of $1x10^6$ cells/mL.

Put the flasks in an incubator (37°C, 5% CO2), and start sorting procedure the day after.

SOLUTION- 13 - Complete culture medium
by Farmacologia Medica

4 Centrifuge the obtained PBMCs at **1200 x g, Room temperature , 00:05:00** .

Aspirate supernatant completely. (Use 15 mL-conical tube)

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 03 - TEFF+TREG Isolation from PBMC with Ã¢ÂÂMiltenyi CD4+CD25+ Regulatory T cell Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxumpnw

Work fast, keep cells cold, and use pre-cooled solutions. This will prevent capping of antibodies on the cell surface and non-specific cell labeling.

Volumes for magnetic labeling indicated in this procedure are for up to 10x10^6 total PBMCs. When working with higher than 10x10^6 cells, scale up all reagent volumes and total volumes accordingly.

For optimal performance it is important to obtain a single-cell suspension before magnetic labeling.

Allegra AVANTI 30
Centrifuge
Beckman Coulter **Beckman Italy**

5 Resuspend the pellet in **100 µl** of **cold SOLUTION- 10** (adjust volumes for 10x10^6 cells).

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

6 Add **10 µl** of **CD4+T Cell Biotin-Antibody Cocktail** (adjust volumes for 10x10^6 cells).

7 Mix well and incubate for **00:10:00** at **4 °C**

8 Add **20 µl** of **Anti-Biotin MicroBeads** (adjust volumes for 10x10^6 cells), mix well and incubate **00:15:00** at **4 °C**

9 Add **5 µl** of **cold SOLUTION- 10** and centrifuge at **1200 x g, Room temperature , 00:05:00**

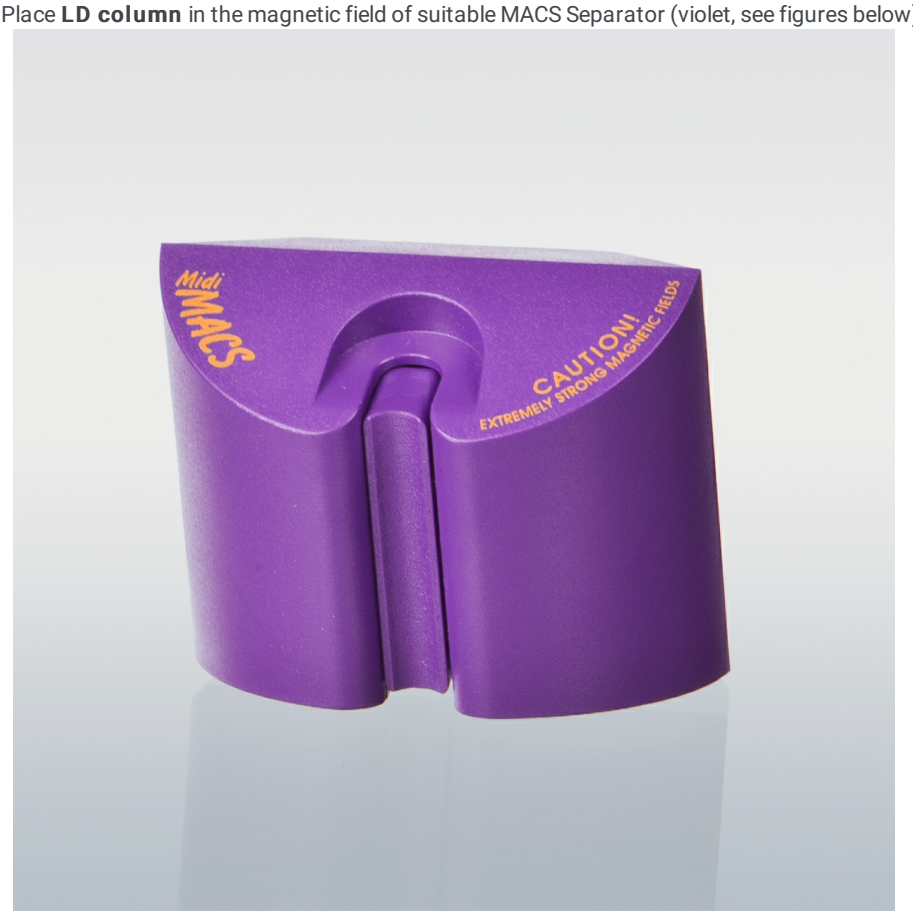
10 Discard the supernatant and resuspend the pellet in **500 µl** of **cold SOLUTION- 10**.

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

11 Place **LD column** in the magnetic field of suitable MACS Separator (violet, see figures below).



Separator must be attached to the MACS multistand (black) in order to work

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 03 - TEFF+TREG Isolation from PBMC with Ã¢ÂÂMiltenyi CD4+CD25+ Regulatory T cell Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxumpnw

12 Prepare column by rinsing it with **3 mL** of **cold SOLUTION- 10** (**trash the effluent**).

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

13 Apply cell suspension onto the column.

14 Collect unlabeled cells that pass through column. Wait until the column reservoir is completely empty.

Wash again **2 times** with **3 mL** of **cold SOLUTION- 10** and **1 last time** with **2 mL** of of the same buffer.

Collect total effluent that is consisting of unlabeled pre-enriched CD4+ cell fraction.

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

15 Centrifuge the obtained effluent at **1200 x g, Room temperature , 00:05:00**

16 Remove supernatant and resuspend cell pellet in **100 µl** of **cold SOLUTION- 10** (adjust the volumes for $10x10^6$ cells).

Use 15 mL-conical tubes.

Volumes for magnetic labeling indicated in this procedure are for an initial starting cell number of up to 10x106 total PBMCs. For higher initial cell numbers, scale up all reagent volumes accordingly.

by Farmacologia Medica

20 Place the **MS column** in the magnetic field of a suitable MACS Separator (green, see figures below).

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 03 - TEFF+TREG Isolation from PBMC with Ã¢ÂÂMiltenyi CD4+CD25+ Regulatory T cell Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxumpnw

Separator must be attached to the MACS multistand (black) in order to work

21 Prepare the column by rinsing with **500 µl** of **cold SOLUTION- 10** and trash the effluent.

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

22 Apply cell suspension onto the column.

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 03 - TEFF+TREG Isolation from PBMC with Ã¢ÂÂMiltenyi CD4+CD25+ Regulatory T cell Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxumpnw

23 Collect the flow-through containing unlabeled negative fraction (T effector cells CD25-).

Wait until the column reservoir is completely empty, wash again **3 times** with **2 µl** of **cold SOLUTION- 10**.

Use 15 mL-conical tube

24 Remove the column from the magnet and place it on a suitable collection tube.

Use 15 mL-conical tube

25 Pipette **1 mL** of **cold SOLUTION- 10** onto the column.

Immediately flush out the magnetically labeled cells by **firmly pushing the plunger into the column**.

The cells that are flushed out are CD25 labeled cells positive fraction (T regulatory cells CD25+).

SOLUTION- 10 - TEFF/TREG isolation buffer
by Farmacologia Medica

26 In order to make sure that collection of cells was complete, **repeat the last step TWO more times**.

27 Centrifuge isolated TEFF and TREG at **1200 x g, Room temperature , 00:05:00**

Allegra AVANTI 30
Centrifuge
Beckman Coulter **Beckman Italy**

28 Resuspend TEFF cells in **1 mL** of **SOLUTION- 4** and TREG cells in **0.2 mL** of **SOLUTION- 4.**

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). Count them under microscope or Cellometer machine, according to the appropriate procedure (see step 2 of this protocol).

SOLUTION- 04 - Wash solution (RPMI/FBS) for PBMC
by Farmacologia Medica

29

OPTIONAL STEPS

If required, it is possible to check the purity of isolated TEFF and TREG.

Proceed as follows:

- Put PBMCs ($0.5x10^6$ cells), Teff ($0.5x10^6$ cells) and TREG (at least $0.3x10^6$ cells) into 3 different BD Tubes;
- Centrifuge at **1200 x g, Room temperature , 00:05:00**
- Remove the supernatant and resuspend the pellet in **50 µl PBS 1X** ;
- Add the adequate antibodies such as: **CD4 APC-Cy7** (**2.5 µl** , BD cat. n. 557871), **CD25 PE** (**10 µl** , Miltenyi cat. n. 120-001-311) and **CD127 AF647** (**10 µl** , BD cat. n. 558598) or conjugated to other fluorochromes;
- Incubate for **00:20:00** , in the **dark at RT**;
- Wash with **1 mL** of **PBS 1X** and centrifuge **1200 x g, Room temperature , 00:05:00** ;
- Resuspend the pellet in **350 µl PBS 1X** and leave on ice until FACS acquisition with an appropriate protocol.

SOLUTION- 02 - Phosphate Buffered Saline (PBS)
by Farmacologia Medica
