BEFORE STARTING

If you need to obtain **CD4+ T cell for subsequent cell culture**, make sure you are using **sterile buffers** and **sterile plastic disposables** as well. Moreover, **work under laminar flow hood when you are processing samples** (from the beginning to the end of the following procedure). Otherwise, use non-sterile Buffers and disposables, and process samples in a cell isolation laboratory.

IMPORTANT NOTE: the isolation protocol is calibrated for using **25µL of beads for 10x10^6 PBMCs resuspended in 1mL.** For lower or higher cell number than 10x106, resize the volumes, accordingly. (See also Table 1on the data sheet of the kit).

ALL REAGENTS MUST BE AT ROOM TEMPERATURE WHEN USED!!!

1 Isolate PBMCs according either to the standard protocol from fresh blood or from buffy coat (PBMC- 01a - Isolation of Human PBMC from Buffy Coat, PBMC- 01b - Isolation of Human PBMC from Whole Blood).

2 Count the cells with Cellometer machine or by manual count, using either Trypan Blue or Türk solutions accordingly.

For automatic cell count with Cellometer machine use Trypan Blue.
Follow protocol **CELL COUNT- 03**

SOLUTION- 09 - Trypan Blue solution
by Farmacologia Medica

For manual cell count use Türk solution for checking purity.
Follow protocol **CELL COUNT- 02**

SOLUTION- 08 - Türk solution
by Farmacologia Medica

Cellometer Auto T4
Automated cell counter
Nexcelom Bioscience **EuroClone**

3 Resuspend Dynabeads in the vial using a vortex for >30 sec.

4 Transfer the desired volume of Dynabeads to a 5mL-tube (use BD tubes cat. n. 352054) following this proportion: **25µL of beads for 10x10^{6}cells.**

5 Add **2 µl** of **Solution- 11** (found in the kit materials as Buffer 1), resuspend and place the tube into the magnet: beads will attach to the magnet very quickly (few seconds).

Discard then the supernatant by using a glass Pasteur pipette.

Remove the tube from the magnet.

SOLUTION- 11 - CD4+T cells isolation buffer
by Farmacologia Medica

6 Repeat the washing step 2 or 3 times to make sure that DMSO is all washed up.

7 After counting, centrifuge PBMCs sample at **1200 x g, 00:05:00** .

Allegra AVANTI 30
Centrifuge
Beckman Coulter **Beckman Italy**

8 Discard supernatant and resuspend pellet of $10x10^6$ cells in **1 mL** of **SOLUTION- 11**.

SOLUTION- 11 - CD4+T cells isolation buffer
by Farmacologia Medica

9 Transfer cell suspension into the tube with beads, and resuspend vigorously.

10 Incubate the beads with cells for **00:20:00** at **4 °C** with gentle rotation by putting the Sample Mixer in the fridge.

11 After incubation place the tube on the magnet and wait for 1-2 minutes, that is until the complex beads-cells is completely attached to the magnet.

12 ⚠

While the tube is still in the magnet, carefully **remove** and **discard** the **supernatant** with a glass Pasteur pipette.

13 Remove the tube from the magnet, add **2 µl** of **SOLUTION- 11** and resuspend the cells very vigorously because of aggregates.

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 02 - CD4+ T cell Isolation from PBMC with Ã¢ÂÂDynabeads CD4 Positive Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxqmpmw

SOLUTION- 11 - CD4+T cells isolation buffer
by Farmacologia Medica

14 Repeat steps 11-13 twice (in total 3 times) to wash the bead-bound CD4+ T cells. These steps are critical to obtain a high purity of isolated cells.

15 Resuspend cell pellet in **100 µl** of **SOLUTION- 07** (found in the kit materials as Buffer 2)

[The volume is calibrated for $10x10^6$ cells, for lower or higher number of cell resize the volume accordingly].

SOLUTION -07 - RPMI/FBS 1%
by Farmacologia Medica

16 Add **10 µl** of **DETACHaBEAD® CD4** for each $10x10^6$ PBMCs.
(Resize this volume if the number of starting cell is different)

17 Add another **500 µl** of **SOLUTION- 07** to increase the volume and transfer everything in a 1.5 mL eppendorf.

SOLUTION -07 - RPMI/FBS 1%
by Farmacologia Medica

18 Incubate **00:45:00** at **Room temperature** (RT) with gentle rotation by using a Sample Mixer.

19 Transfer the sample from eppendorf to BD tube, and place the tube on magnetand wait for 1-2 mins, that is until the complex beads-cells is completely attached to the magnet.

20 ⚠

While the tube is still in the magnet, **transfer the supernatant** containing the released cells into a 15 mL conical tube.

To obtain residual cells, wash the beads 3 times with **500 µl** of **SOLUTION- 07** and collect the supernatant each time.

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 02 - CD4+ T cell Isolation from PBMC with ÃçÂÂDynabeads CD4 Positive Isolation KitÃçÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxqmpmw

SOLUTION -07 - RPMI/FBS 1%
by Farmacologia Medica

21 Add to the detached cell suspension **SOLUTION- 07** to a final volume of **5 mL** and centrifuge at **1200 x g, Room temperature , 00:05:00**

SOLUTION -07 - RPMI/FBS 1%
by Farmacologia Medica

Allegra AVANTI 30
Centrifuge
Beckman Coulter **Beckman Italy**

22 Resuspend the cells for cell counting in **1 mL** of **SOLUTION- 07**: follow the appropriate protocol (see step 2 of this protocol).

Check the viability with Trypan blue.

SOLUTION -07 - RPMI/FBS 1%
by Farmacologia Medica

SOLUTION- 09 - Trypan Blue solution
by Farmacologia Medica

23

OPTIONAL STEP

Citation: Marco Cosentino, Elisa Storelli, Alessandra Luini, Massimiliano LM Legnaro, Emanuela Rasini, Marco Ferrari, Franca Marino (11/21/2020). PBMC- 02 - CD4+ T cell Isolation from PBMC with Ã¢ÂÂDynabeads CD4 Positive Isolation KitÃ¢ÂÂ. https://dx.doi.org/10.17504/protocols.io.bpxqmpmw

Check the purity of the isolated CD4+ T cells by flow cytometry.

If needed, check the purity by labeling CD4 with the appropriate CD markers, such as CD3, CD4, CD8 and CD14 Ab and analyze samples with a flow cytometer to exclude the presence of undesired subsets.

BD FACS Celesta
Flow Cytometer
Becton Dickinson **Milan Italy BD**

24 EXPECTED RESULTS

Cell Viability: ≥95 %

Cell Yield: ± 4,6 x10^6 cells starting from 25 mL of Fresh Blood
± 6 x10^6 cells starting from 25 mL of Buffy Coat

If checked, purity of the isolated CD4+ cells must be ≥95 %
