### **Everyone is talking about this portable Bug Zapper...but is it worth the hype?**

The Buzz B-Gone Zap is a mosquito and insect killing system designed to work indoors and outdoors.

The device uses a light and a grill to kill annoying insects – like mosquitos, flies, and other flying bugs. Bugs see the light and fly towards it, thinking it's a food source. When bugs get too close, they encounter the electric grill and get zapped.

**[Click Here To Visit The BuzzBeGone Official Website](#)**

**Could this be the best portable bug zapper?**

## Breakthrough Technology

Here are some of the key features advertised on the official website:

**Attracts and Zaps Bugs:** The key feature of Buzz B-Gone Zap is its ability to attract and zap bugs. Bugs fly towards the light because they're naturally attracted to it, thinking it's a food source. When bugs try to touch the light, they encounter the electric coils instead, zapping them and killing them instantly.

**Purple LEDs:** While some bug zappers use ultraviolet light to attract bugs, Buzz B-Gone Zap uses purple LEDs. According to the manufacturer, purple LEDs attract bugs to the unit, giving you effective protection against mosquitos.

**No Harmful Chemicals:** Some people use pesticides and other artificial solutions to attract and kill bugs. You might spray your backyard, for example, to eliminate mosquitos. Buzz B-Gone Zap is a more natural solution free of toxic chemicals. You can enjoy a bug-free environment without poisoning your family or pets.

**Rechargeable:** Buzz B-Gone Zap comes with a rechargeable, long-lasting battery.

**Portable:** Because Buzz B-Gone Zap has a rechargeable battery, you can carry it wherever it needs to go. The bug zapper is designed for use indoors or outdoors, and you can easily carry it camping, hiking, or to anywhere where you don't have electricity.

**Stand It or Hang It:** Buzz B-Gone Zap stands upright on its own. The device also features a fabric loop that you can hang around your home or backyard. Whether using it like a lamp or hanging it from a loop outdoors, Buzz B-Gone Zap can stand or hang anywhere.

## How does it work?

The Buzz B-Gone Zap works by confusing the navigation systems of bugs. Bugs think that the

purple LED light is a food source, so they fly towards it.

When bugs get too close to the light, they encounter the electric coils. The electric coils zap the bugs, killing them instantly.

The electric coils are surrounded by a ring to protect you, pets, and kids from touching the coils. Bugs can easily fly through the ring and hit the electric coils, but it's difficult to touch the coils accidentally (say, if you walk by the unit or brush against it).

Inside the Buzz B-Gone Zap is a battery like the one on your phone. The battery powers the purple LED light and the electric coils on the device. The unit runs for 3 to 6 hours on a single charge.

You can sit around the Buzz B-Gone Zap as it works. Or, you can leave the unit outside or in a room before you're there. The unit runs constantly, safely zapping bugs for as long as the battery is operational.

Once the Buzz B-Gone Zap runs out of battery life, you recharge it using the included micro-USB. The micro-USB cable works like any smartphone charging cable. You can plug it into your computer's USB port to charge it. Or, you can use your phone charger's USB adaptor to plug the Buzz B-Gone Zap into an electrical outlet in the wall.

#### **BuzzBGone Reviews Consumer Reports:**

Many customers have testified to the efficacy of BuzzBGone and how it has helped them in eliminating mosquitoes in their homes and environments. Here are some of their reviews on the USA trustpilot.

**Thomas:** I have made use of some devices used in killing mosquitoes in the past and I can say that BuzzBGone is the best. It does not only kill mosquitoes in my environment quickly but is also very quiet while in operation.

**Sandy:** I have had issues with some mosquito-killing devices in the past. Either it stops working after some time or it is not effective. There was this one I had that didn't kill mosquitoes even when they perch on it. I came across this BuzzBGone some months ago. I won't lie that I had doubts while purchasing it and this device has been doing wonders since I started using it.

### **BuzzBGone Reviews Verdict**

Summer is here, and so are those annoying mosquitoes. Finally there's an easy way to enjoy the summer without red welts all over your body. Or the awful smell of those anti-mosquito sprays. With this review report so far, you can see we have an effective alternative solution for protecting your family from the mosquitoes safely. BuzzBGone can effectively help to remove insects from your home or work environment easily and effectively. BuzzBGone uses LED to attract insects and a powerful 360-degree suction fan to capture them.

BuzzBGone kills mosquitoes and is perfectly safe for children and pets. It's ultra-quiet, small, and light, perfect for camping, outdoor meetings, and indoors too. All available BuzzBGone Reviews confirm that every human loves BuzzBGone while mosquitoes hate it. Moreso, BuzzBGone is an effective way of eliminating mosquitoes in your environment using volts through electrically charged metal grids.
