BOC Sciences

Non-cleavable linkers require mAb degradation within lysosomes after ADC internalization to release the active drug. **BOC Sciences** provides synthetic non-cleavable linker products with a wide range of scales, purities, and delivery time options to meet your research needs. We ensure that each custom linker product is multiple-checked for quality via both mass spectrometry (MS) and high-performance liquid chromatography (HPLC) analyses during linker purification and quality control (QC) procedures after each step.
