ABSTRACT

Abstract

Introduction: Acute cardiovascular diseases including acute coronary syndrome, acute decompensated heart failure, and acute aortic diseases are leading causes of death in acute clinical settings. Quality indicators are widely used in cardiovascular field to assess and improve the quality of care, but there was no comprehensive review which summarize and assess the currently used quality indicators for acute cardiovascular diseases.

Methods and analysis: The scoping review will be performed according to the Preferred Reporting Items for Systematic reviews and Meta-Analyses extension for Scoping Reviews (PRISMA-ScR) statement. The review will include the following five-stage approach by The Joanna Briggs Institute: (1) identifying the research question; (2) identifying relevant studies; (3) study selection; (4) charting the data and (5) collating, summarize and report the results.

Ethics and dissemination: Since our study is a review of the literature, ethics approval is not indicated. We will present the findings from this study in peer-reviewed journals.
