- 1 Bone dry clay (small chunks/trimmings are better). Drying clay first allows it to break down and mix better than using wet recycled clay.
- 2 Cover with water. Soak overnight at least.
- 3 Blend. I used an old blender. Adding water as needed to keep it moving.
- 4 Add colorants.

- 4.1 To keep track of the percent colorant you first have to get the amount of clay in your slip (vs water content).

5 Blend

- 6 If using as slip, keep it in a sealed container.

- 7 If using as moist clay, pour onto plaster to dehydrate.
