ABSTRACT

10x Genomics protocol where you fix the whole tissue and then dissociate it in preparation for Chromium Single Cell Expression flex

Protocol ID# (CG) and Revision letter provided here:

10x protocol CG000553, Revision A-- Fixation and dissociation of whole tissue; preparation for 10x Chromium Flex scRNAseq

Note: These protocols may not be the current version offered by the company but were used to produce the specific datasets connected to them. Please review the company support websites for the most recent versions of the protocols prior to starting your experiment.
