This protocol is for teaching purpose

BEFORE STARTING

Before starting this protocol, you need to have recieved the list of articles you will be working on.
Contact the professor if you haven't received the dataset.

Data download

- 1 Once you have received the link to download your dataset, download the csv file locally.

Make sure to save it on your computer in a convenient folder!

The goal of this review process is to

- Ensure a quality control for the dataset collected by peers
- Discuss and document potential choices that have to be taken during the collection process

Database name and link

2 First, access the article describing the dataset

Remember that you can use the column "DOI" to find the article online.

In order to access the paper search in you web browser :

<https://doi.org/> + DOI number

3 First, look at the name collected for the database and the one in the paper. Do you see any potential mistakes?

Keep in mind the following:

- Does the database has two names or one? Was this reported correctly in the dataset to review?
- Is the paper about a new database or an update? Was this reported correctly in the dataset to review?

If any discrepancy or conflict is detected, add a note in the Note_review2021 column of the spread sheet. Do not modify the original data collected directly.

Database link and accessibility

4 Next we want to assess if the URL and the accessibility reported for the database is exact.

Look at the URL collected, is it matching the one visible in the article?

If any discrepancy or conflict is detected, add a note in the Note_review2021 column of the spread sheet. Do not modify the original data collected directly.

5 Finally, we want to check the availability of the database.

Follow the link and assess if the resource is available or not. Does it match what was reported in the data collected?

Once again, if any discrepancy or conflict is detected, add a note in the Note_review2021 column of the spread sheet. Do not modify the original data collected directly.

Submit dataset

6 Great job! You collected all the data we needed to complete the DB Justice League!

Upload the table on Github and notify us of the upload!

Thank you for your great contribution!
