## Abstract

Donor case selection protocol for Johns Hopkins TMC describes criteria for human tissue biopsy collection.

## Before start

Patient samples are obtained from skin that is to be discarded from patients presenting for reconstructive or aesthetic procedures necessitating skin excision. No other procedures or follow-up is needed for research purposes.

## Inclusion

---

- 1     Age 18-35 or 50 and over  
      English Speaking  
      Able to provide consent  
      Undergoing reconstructive or aesthetic procedures necessitating skin excision at the scalp or abdomen

## Exclusion

---

- 2     Known collagen disorder  
      Strong personal history of keloid formation  
      Deemed unfit for general anesthesia  
      Active infection of skin where samples may be taken
