Ruth Timme
US Food and Drug Administration

> This method is under development and assessment for suitability of use. It is likely that modifications will be made to improve the method.

PURPOSE:
This method was developed at the FDA's Center for Food Safety and Applied Nutrition for GenomeTrakr's pandemic response project, monitoring SARS-CoV-2 variants in wastewater . Protocols developed for this project cover wastewater collection, concentration, RNA extraction, RT-qPCR, library prep, genome sequencing, quality control checks, and data submission to NCBI.

This protocol covers the last step of making your data public at NCBI. Specifically, it provides the steps to establish a new NCBI submission environment for your laboratory, including the creation of new BioProject(s) and submission groups. Once these are step up, the protocol then walks through the process for submitting raw reads to SRA and sample metadata to BioSample through the Submission portal.

For new submitters, there's quite a bit of groundwork that needs to be established before a laboratory can start its first data submission. We recommend that one person in the laboratory take a few days to get everything set up in advance of when you expect to do your first data submission.

If you need a pipeline for frequent or large volume submissions, follow Step 1 in this protocol to get your NCBI submission environment established, then contact gb-admin@ncbi.nlm.nih.gov to set up an account for submitting through the API.

:

> This method is under development and assessment for suitability of use. It is likely that modifications will be made to improve the method.

This protocol has three sections:

- **Section 1**: Setting up NCBI accounts (for new users)
- **Section 2**: Single-step data submission to **SRA** for raw reads and associated sequence metadata and to **BioSample** for sample metadata
- **Section 3:** Detailed steps for creating a BioProject (usually done once during the account set-up)

Associated protocols:
- NCBI Data Curation protocol for making updates, corrections, or retractions to your data.

"**Ingredients**" to have in place before starting your submissions

1   **Set up a new NCBI submission environment for your lab**
    1.1: Create an NCBI user account
    1.2: Set up an NCBI submission user group for your lab
    1.4: Bookmark the link to your Submission Portal
    1.5. Identify or establish new BioProjects (detailed in **Step 3**)

    Ready for data submission:
    After these steps are complete you can proceed with **BioSample + SRA** data submission in **Step 2.**

    1.1   **NCBI data object model established for the GenomeTrakr wastewater project:**

          Adhering to this standard is **extremely** important for standardizing submission protocols AND downstream analysis, both for our program at the FDA and for others around the world.
          This structure includes the following NCBI databases:
          - A single BioProject for each laboratory
          - BioSample for storing sample metadata (created at the extract level)

- SRA for raw sequence reads and associated metadata (created at the sequence level)

NCBI wastewater data object model
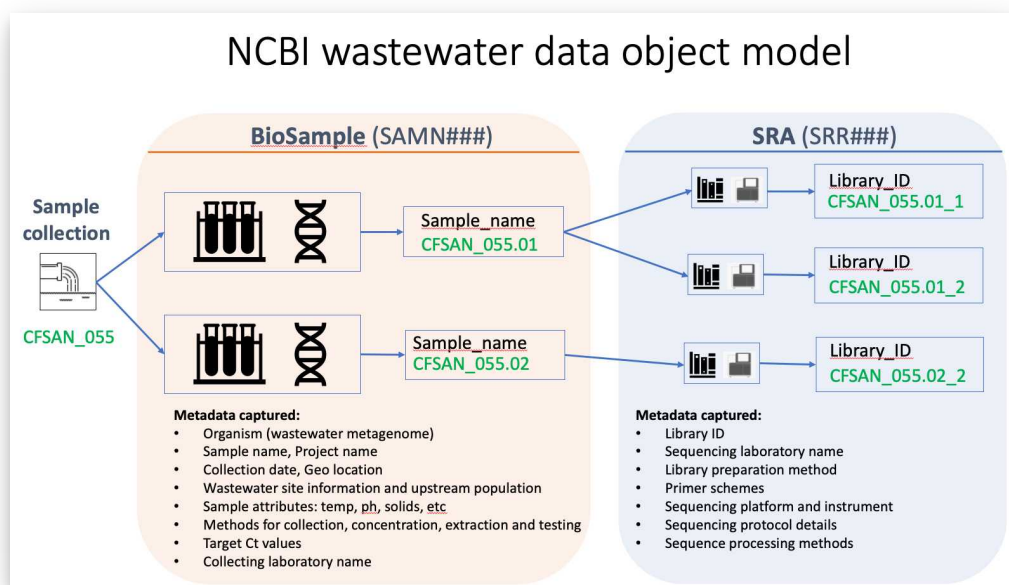

1.2 **Create an NCBI user account** at NCBI: https://www.ncbi.nlm.nih.gov/account

1.3 Establish an NCBI submission user group for your laboratory.

We recommend using this user group for all NCBI submissions related to microbial genome surveillance. This will link your laboratory's NCBI data ownership to the *user group* and not to individuals, allowing anyone in the current group to perform updates or retractions and answer inquiries from the NCBI staff, even if there's been a complete turnover of staff since the original data submission.

User groups also ensure consistent data ownership across BioProjects, BioSamples, and sequence data. If your laboratory has non-overlapping research groups submitting and managing data at NCBI, multiple user groups can be established to track these efforts separately.

Your laboratory might already have a submission group established! Check the "Group" tab in the Submission Portal, https://submit.ncbi.nlm.nih.gov/groups/. Ask your colleagues to do the same thing, to ensure your laboratory doesn't already have one in place.

Submission Portal Home My submissions Manage data **Groups** Templates My profile

Groups

Group Id	Full name	Aliases	Department	Institution	Contact email	Members
fda	FDA Center for Food Safety and Applied Nutrition	FDA/CFSAN	CFSAN-ORS-DM-MMSB	US Food and Drug Administration	GenomeTrakr@fda.hhs.gov	13
fda_ny	FDA/CFSAN/NY_State		CFSAN-ORS-DM-MMSB	US Food and Drug Administration	Ruth.Timme@fda.hhs.gov	6
fda_mdh	FDA/CFSAN/MDH		CFSAN-ORS-DM-MMSB	US Food and Drug Administration	Ruth.Timme@fda.hhs.gov	6
cdphe_gt	GenomeTrakr Project: Colorado Department of Public Health and Environment		Public Health and Environment	Colorado Department of Public Health and Environment	shannon.matzinger@state.co.us	2
unr_gt	GenomeTrakr Project: University of Nevada - Reno		Physiology and Cell Biology	University of Nevada - Reno	AndrewG@unr.edu	3

Creating a new submission group:

1. Submit an email request to **submit-help@ncbi.nlm.nih.gov** containing the following information:

"*Dear NCBI help staff,*

Please establish a new user group for my laboratory.
I'm including the following information to help set up the group:

Short name of the group (abbreviation, e.g. "fda_ny")
Full name of the group (e.g. "NY Wadsworth submission group")
Contact email(s) to start the group
Institution and department or group
Physical address including country
Primary contact person, first and last name plus email.

if you have existing submissions you want to be converted, please request the ownership change in this email.
i.e., Please assign this new user group to the following BioProjects and linked data.

Thank you,"

2. Look for an email reply entitled "**NCBI Submission Portal Group invitation**" and **click** on the enclosed link to accept the invitation.

1.4 **Managing your NCBI submission user group.**

After a user group has been established it can be edited for membership and permissions by clicking in the "group" tab of the Submission Portal (https://submit.ncbi.nlm.nih.gov/groups/), then on the Group Id hyperlink, e.g 'fda_ny' in the above example.

Users with admin privileges can update contact information in the "profile" tab and membership in the "Members" tab. New members can be invited by clicking on the "Invite members" link.

This user group should be kept up-to-date as members enter and leave the laboratory.

Permissions levels:
- READ: primarily for collaborators who can see the submissions, but not edit them.
- MODIFY, SUBMIT, DELETE: Permissions to submit, modify, or retract data (members usually have all or none of these permissions)
- ADMIN: Can invite or remove members of the submission group. Ensure that at least one (or more) members of your group have ADMIN privileges.

1.5 **Bookmark "my submissions"** at NCBI: https://submit.ncbi.nlm.nih.gov/subs/. This is the page where you view and track all of your past submissions.

If you see a blank page with a yellow box in the upper right corner saying "please login", click this link and login using the credentials created in **Step 1.1**.

1.6 Identify or establish a new BioProject

Data BioProjects. Does your laboratory have an established data BioProject for this effort? If not please follow instructions in **Step 3** for creating a new one.

Data submission (BioSample and SRA)

2 Data submission (source metadata and sequence data):

This protocol follows a one-step data submission process where the source metadata is submitted at the same time as the sequence data.

SARS-CoV-2 landing page: https://submit.ncbi.nlm.nih.gov/sarscov2/

Click "**Submit**" under the Sequence Read Archive (SRA) option

2.1 **Download and populate the sample (BioSample) and sequence (SRA) metadata templates:**

1. BioSample custom wastewater template with NWSS/GenomeTrakr guidance and picklists (extension of **NCBI's Generic SARS-CoV-2: wastewater surveillance, v1.0**):

📗 **BioSample_ww_template_v1.4.xlsx**

2. SRA: custom extension of NCBI's SRA metadata template for wastewater samples (using PHA4GE attributes and picklists)

📗 **SRA_ww_template_Nov2021.v5.xlsx**

MOST COMMON SCENARIO: For each wastewater sample collected one BioSample and one associated SRA entry will be created. However, BioSamples for this project are actually created at the extraction level with metadata describing the collection -> extraction methods. If you wanted to submit data across different collection -> extraction methods, you would create separate BioSamples for these different extracts.
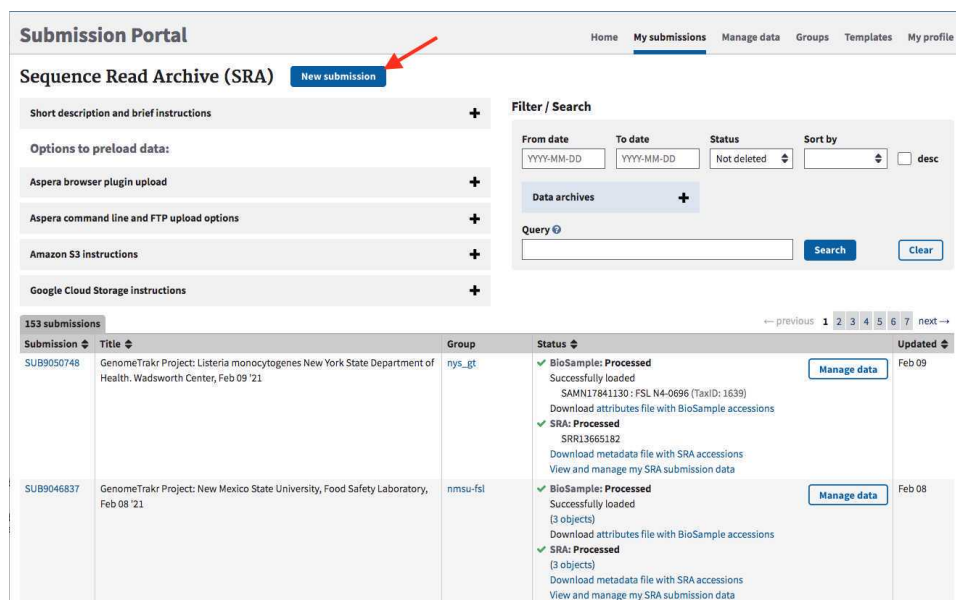

TIP: Create a base ID for each sample collection (for example, LABID_001), then add an index to represent each extraction (e.g.LABID_001.01). Every Sample Name from a single Submitter must be unique.

SRA:created at the sequence level, includes metadata for library-prep and sequencing

methods. If you wanted to submit data across different sequencing methods from the same extract, you might submit multiple runs to SRA, all linked to the same BioSample.

You can submit a single sample at a time, or as a batch from an entire sequencing run or collection.
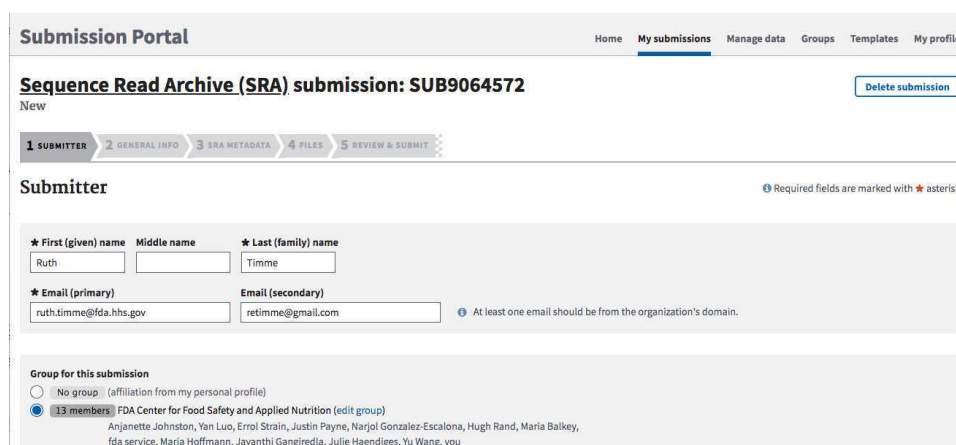

2.2 Click the "New submission" box.

2.3 Submitter tab:

Populate with submitter info. The "submitter" is the name of the person, or user group, who is physically doing the submissions, not a supervisor or PI.

Select the appropriate submission group name (see **Step 1.2** for creating a new submission group), and describe the submitting organization or laboratory name. This will be auto-populated from the contact info you included in your NCBI user account.

Click "Continue" to proceed.

2.4 **GENERAL INFO tab:**

1. BioProject: Did you already register a BioProject for this effort? If not please follow instructions in **Step 3** for creating a new BioProject and return back to this step with accession in hand.

Click "**Yes**" and paste in your data BioProject accession, e.g. PRJNA614995.

2. BioSample: Click "NO" here. You will be registering BioSamples within this current submission

3. Release date:

**During your first submission you will establish a flag on your BioProject to have all future submissions have human-read scrubbing preformed prior to public release (tool here: https://github.com/ncbi/sra-human-scrubber).

First submission? Choose"Release on specified date", then enter a date 1-week in the future. This will give you some time to establish the flag prior to data release.

Send the following email to **sra@ncbi.nlm.nih.gov** asap:

> *Hi sra,*
>
> *Please add the human read scrubbing analysis flag to my BioProject <paste in your bioproject accession here>, then release my HUPed SRA submissions.*
>
> *thanks,*

Hi sra,

Please add the human read scrubbing analysis flag to my BioProject <paste in your bioproject accession here>, then release my HUPed SRA submissions.

thanks,

Otherwise, choose "Release immediately following processing".

4. Click **Continue.**

2.5 BIOSAMPLE TYPE tab:

You are choosing the appropriate metadata package here (i.e. what kind of samples are you submitting?).

Select "**SARS-CoV-2: wastewater surveillance**"

2.6 BIOSAMPLE ATTRIBUTES tab:

Choose "Upload a file using Excel or text format (tab-delimited) that includes the attributes for each of your BioSamples".

Then click "Choose File" and browse to your populated PHA4GE BioSample_template Excel file.

If you have not populated your **wastewater BioSample metadata** template yet, download and follow the guidance in **Step 2.1**.
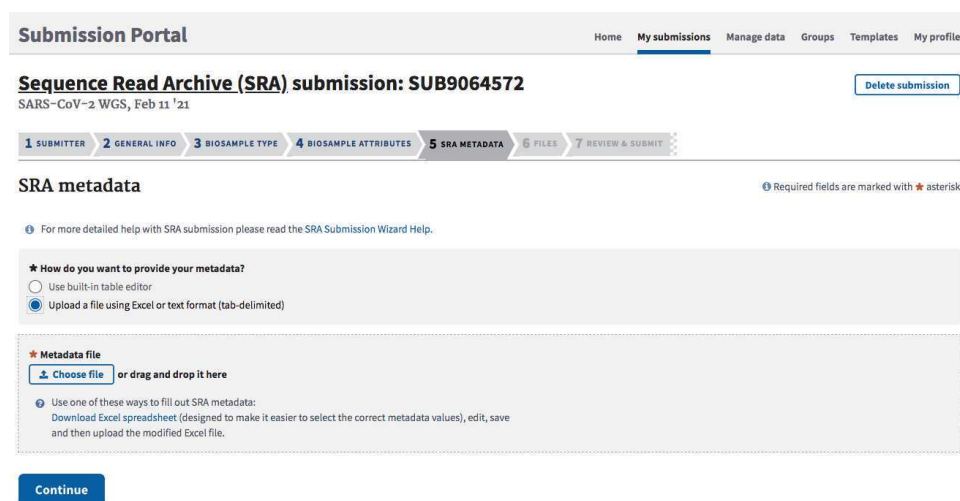

**Skip antibiogram sections (not relevant for SARS-CoV-2)

Click "**Continue**".

NCBI will do a validation check on your metadata. Resolve any red "errors" reported back by editing the spreadsheet and replacing the uploaded file. Review any yellow "Warnings" and proceed if everything looks ok.

Click **"Continue".**

2.7 **SRA metadata tab:**

Choose: "Upload a file using Excel or text format (tab-delimited)"

Upload the SRA metadata template populated in Step 2.1 (Excel file works here).

Click **"Continue".**

NCBI will do a validation check on your metadata. Resolve any red "errors" reported back by editing the spreadsheet and replacing the uploaded file. Review any yellow "Warnings" and proceed if everything looks ok.

Click **"Continue".**

2.8 **Files tab:**

Each laboratory will establish its own path for transferring files.

In general, selecting the web browser option should work for uploading a couple dozen samples at a time. For a more stable internet connection, your laboratory can use FTP or Aspera. Directions for doing so pop up after clicking the FTP radio button

Files

ⓘ Required fields are marked with ⭐ asterisk

ⓘ
- **Each file must be listed** in the SRA metadata table you uploaded. If you are uploading a tar archive, list each file name, not the archive name.
- **Unique file names** that **do not contain any sensitive information** should be used for all files. File names as submitted appear publicly when data is retrieved from the cloud.
- Files can be compressed using **gzip** or **bzip2**, and may be submitted in a **tar** archive, but archiving or compressing your files is not required. **Do not use zip!**

⭐ **How do you want to provide files for this submission?**
◯ Web browser upload via HTTP or Aspera Connect plugin
   Do not use web browser HTTP upload if you are uploading files over 10 GB or more than 300 files.
◯ FTP or Aspera Command Line file preload
   All files for a submission must be uploaded into a single folder.
◯ AWS or GCP bucket

☐ Autofinish submission ❓

Continue

2.9   REVIEW & SUBMIT tab:

Check over your entire submission, then click submit.

If corrections are needed, you can go back and select individual tabs to edit your submission.

> If you are having trouble finalizing your submission, contact the relevant NCBI database for assistance and include your submission ID in the email subject (SUB######):
>
> **BioSample** (for source metadata issues): biosamplehelp@ncbi.nlm.nih.gov
> **SRA** (for raw sequence or sequence metadata issues): sra@ncbi.nlm.nih.gov

2.10   **BioSample accessions** will be automatically created upon submission and will be available on the "my submissions" page of the Submission Portal by clicking on "## objects" within the submission record (usually within 2 hours). You can also download by clicking the "Download attributes file with BioSample accessions". Accessions will start with SAMNxxxxxxxx. You will also receive an email containing these same accessions.

2.11 SRA Accessions:

SRA run accessions will be available on the "my submissions" page of the Submission Portal by clicking on "## objects" within the submission record (usually within 2 hours). You can also download by clicking the "Download metadata file with SRA accession". Accessions will start with SRRxxxxxxx." You will also receive an email containing these same accessions.

2.12 Important data stewardship and curation notes:

- Develop an internal method for storing and tracking your BioSample and SRR accessions! They are required for making future updates to your records.

- For updates, corrections, or retractions to your BioSample and SRA records, follow the guidance provided in the NCBI Curation Protocol: https://www.protocols.io/view/ncbi-data-curation-protocol-bacaiase. Some edits can be made within the Submission Portal and others need to be done via email.

> ⚠️ *Caution*: It is possible for a single BioSample to have more than one SRR IDs. Two scenarios include:
> 1. Two runs were submitted for the same isolate/BioSample, which is not generally recommended for surveillance. Follow **Step 3** in the NCBI curation protocol to retract one of them).
> 2. if the initial submission was retracted and new a new run was submitted. It's important to keep track of both IDs, even if one was retracted.

BioProject Creation

3   **Create a new BioProject**

BioProjects are an organizing tool at NCBI that pulls together different kinds of data submitted across multiple NCBI databases. Each BioProject has a unique URL, providing a home page with a title, description, links to lab websites, publications, funding resources associated with a particular project, along with links to the deposited data. A basic **data BioProject** holds actual sequence data and their associated metadata. An **umbrella BioProject** is a way to group two or more data BioProjects together, which is useful for coordinating disease surveillance and for looking across the grouped BioProjects in a single view.

This protocol describes the steps for creating a new *data* BioProject linked to an existing *umbrella* BioProject (usually established by a coordinating group, e.g. NWSS or GenomeTrakr).

> **Umbrella BioProjects:** If you think need to establish a new umbrella BioProject (for an entirely new project or laboratory network), send an email to bioprojecthelp@ncbi.hlm.nih.gov and they will help create one for you.

3.1

Navigate to the "My Submissions" page, https://submit.ncbi.nlm.nih.gov/subs/, and click "BioProject" in the "Start a new submission" box.

3.2   **Click the "New submission" button:**

3.3   **SUBMITTER tab*:***

Populate with submitter info. An NCBI "submitter" is the name of the person or submission group who is managing the submissions, not a supervisor or PI.

Select the appropriate submission **group name (see **Step 1.2** for creating a new submission group), and describe the submitting organization or laboratory name. This will be auto-populated from the contact info you included in your NCBI user account.

[Environment ⬍]

ⓘ **Sample scope choices**

Monoisolate: a single animal, cultured cell-line, inbred population (or possibly a heterogeneous population when a single genome assembly is generated from the pooled sample; not preferred).

Multiisolate: multiple individuals, a population (representative of a species). To be used for variation or other sequence comparison projects, not when multiple genomes will be annotated. Make separate monoisolate projects when more than one genome will be annotated.

Multi-species: sample represents multiple species.

Environment: the species content of the sample is not known.

Synthetic: the sample is synthetically created by a machine.

Other: specify the sample scope that was used.

3.5 **TARGET tab:**

Populate **ONLY** the Environmental sample name here: "wastewater metagenome" for the GenomeTrakr wastewater project.

Leave the strain info fields blank.

3.6 GENERAL INFO tab:
